

MOJO BARRIER STRAIGHT, SILVER

The industry-leading MOJO barrier in silver offers reliable and professional crowd control for concerts, festivals, and large-scale events. Designed for durability and a polished, classic appearance.

SKU: 1026969 | **Categories:** [Concert Barricades](#), [Crowd Control](#)

PRODUCT DESCRIPTION

The MOJO Straight Concert Barrier is an essential component of any comprehensive crowd control system for concerts, festivals, and large-scale events. Available in two distinct finishes—full silver or black—this barrier combines structural stability with adaptability to meet the needs of diverse event environments.

The black version seamlessly blends into the background, making it ideal for stage productions, television recordings, and events where aesthetics are key. The silver version, with its classic, professional appearance, is perfectly suited to traditional venues and formal settings.

Both finishes are engineered for maximum stability and rapid setup. The vertical panel securely locks into a horizontal base plate with two rear braces, while the audience's weight on the front plate reinforces the barrier's strength. The rounded top rail ensures attendee comfort, and the rear step allows security personnel quick visual and physical access to the crowd. Assembly is fast and secure, with each section connected by a single bolt and location pin.

The sloping base plate provides easy access, and the grooved surface helps drain liquids, minimising slip hazards. With high durability and functionality, these barriers are the optimal choice for any event requiring dependable crowd management.

TECHNICAL INFORMATIONS

Weight	34 lbs
Dimensions	1 × 1.18 × 1.28 in
Height	1.20 m
Colour	Silver
Material	Welded aluminium
Feet Type	Integrated sloping base plate for stability and accessibility
