

TERRAFLOR[®] TURF PROTECTION FLOORING

Terraflor panels provide versatile protection for natural and synthetic turf, offering safe, damage-free surfaces for light to medium event traffic.

SKU: 1001450 | **Categories:** [Event Flooring & Ground Protection](#), [Turf and Surface Protection](#)

PRODUCT DESCRIPTION

The Terraflor[®] Turf Protection Flooring system delivers robust, translucent ground cover designed to shield natural and synthetic turf during events. Its innovative design allows light and air to pass through, enabling grass to continue photosynthesising, making it ideal for long-term use on natural turf.

Each panel features an integrated anti-slip surface with raised air holes, preventing liquid build-up while maintaining airflow to protect turf health. Weighing just 31 kg per panel, Terraflor is lightweight and easy to handle, requiring only two people for installation. This makes it an efficient solution for quickly covering large areas.

The panels connect securely using an intuitive locking system, allowing a 20-person crew to install up to 8,000 square metres of flooring in 8-10 hours. Designed to handle light to medium loads, Terraflor is the ideal choice for protecting event grounds from pedestrian traffic and light equipment.

TECHNICAL INFORMATIONS

Weight	31 lbs
Dimensions	2.25 × 0.035 × 1.5 in
Material	High-density polyethylene (HDPE)
Colour	Translucent
Applications	Turf protection, pedestrian traffic, light equipment use
