

## TERRAPLAS<sup>®</sup> TURF PROTECTION FLOORING

Terraplas translucent turf protection flooring provides reliable protection for natural grass, supporting light to medium loads with or without feet.

**SKU:** 1004343 | **Categories:** [Turf and Surface Protection](#)

## PRODUCT DESCRIPTION

Terraplas<sup>®</sup> Turf Protection Flooring offers a high-quality, versatile system for safeguarding natural grass during events. Its translucent design allows light, air, and water to reach the turf, ensuring that grass remains healthy even during prolonged coverage.

The panels are available in two versions: one with rounded feet for optimal turf protection and one without feet to suit North American stadium standards. Each panel is pre-assembled in large segments (2m x 2m), making them quick and easy to install over large areas. The non-slip surface and secure interlocking system enable fast, tool-free setup by hand, providing an efficient and effective solution for stadiums and event organisers.

Constructed from UV-stabilised, high-density polyethylene (HDPE), Terraplas panels are designed to perform in a wide range of climates, withstanding temperatures from -20°C to +50°C. Capable of handling light to medium traffic, including pedestrians and light vehicles, this durable flooring system is perfect for year-round event use.

## TECHNICAL INFORMATION

<b>Weight</b>	50 lbs
